Mermaid diagram

Using a `data:` URI doesn't work on GitHub, so use `loc=` to generate an external file.

This *does* show up in the Beamer slides, but weirdly positioned/sized, no matter what I do.

Mermaid diagram (PDF version)

Here a `.mermaid format=svg` hidden from slides in a "notes" section, but shows up in the README.

The Makefile generates a PDF version that can is embedded into the next slide with LaTeX's `\includegraphics`. So sometimes you have to `make` twice.[1]

Mermaid diagram (PDF version, cont'd)

Here's the \includegraphics version, using the PDF, which shows up in the PDF slides but not the README. Hat tip to Jeromy Anglim.[2]
